About you

Your name *

Bakhtiyor Sohibnazarov

Your student ID *

Z22590018

Your course *

Computer Science

Your module *

- (●) Undergraduate Final Year Project (CMP-X301-0)
- ( ) MSc Project

Year of study *

3rd

Todays date *

01/12/2025

About your research with people

Project title *

OST - Human Osteo-Skeletal Tracking

Project description. Please briefly describe your motivation, the research you will undertake and the artefact you intend to create. *

Its a research project in collaboration with School of Health and Life Sciences that tracks physical fatigue through monitoring skeleton with depth camera in a controller environment

Will your research involve human subjects? For example, will you conduct interviews, surveys or usability tests to help you design and evaluate your work? *

- (●) Yes
- ( ) No

What form of research best describes your plans? (click all that apply) *

- [ ] Survey (online)
- [ ] Survey or questionnaire (conducted in-person)
- [ ] Interviews with experts or professionals
- [x] Usability testing
- [ ] Focus groups
- [ ] Other

How will you recruit participants? *

Participant recruiting done by Health and Life sciences

Will your research be done ONLY with Roehampton University staff and students, or with external participants? *

- (●) ONLY Roehampton
- ( ) ONLY external
- ( ) Both

Confirmation of your ethical responsibilities

Please read the following carefully before completing the declaration below. If you have any questions ask the module leader or your supervisor before confirming.

Ethical Research

Ethical research means conducting studies with integrity, ensuring the protection of participants, and adhering to principles of honesty and transparency.

Roehampton's documentation on Research Ethics is here: https://www.roehampton.ac.uk/research/ethics/

Consent and Rights of Participants

Consent to participate in a project should be obtained from all participants. This should be 'informed' consent so that the participants know what is involved and what they are agreeing to. This information should include what the research is for, what participation involves, how long it will take, how many other participants might be present and how the data collected will be used. Participants should also be informed that they may withdraw from the research at any time.

To comply you must:

- Download the attached Participant Consent Form template from Moodle and amend as necessary
- Ensure that the consent form contains appropriate information about your research and your intended use of data
- If images or anything else which might allow the identification of participants is to be publicly accessible (eg on the web), a separate section regarding this should be included on the participant consent form.
- If you are researching (eg. undertaking a usability test) with other students, you need to obtain consent but you may give participant information, including right to withdraw, verbally and obtain consent verbally. You still need to record this however in your notes or audio/video recording.
- Questionnaires should always include participant information and an opt-in consent checkbox.
- Normally, data should be anonymised. If you are interviewing an expert or professional you can seek and document consent to use their name in your research.

Storage of Data

Storage of Data Data for Undergraduate and taught-Master's students (MA and MSc) research projects should be retained until the end of their degree, or if publishing, according to the University's Records Retention Schedule. Data should be collected and processed in accordance with the General Data Protection Regulation, the Data Protection Act 2018, the University's Data Protection Policy, IT Policy and Data Protection Guidance for Researchers.

Risk assessment

For computing projects risk assessments would not normally be required. However if you are going to undertake research outside of participants normal place of work or home you should speak with your supervisor.

Children (Under 18s) and Vulnerable Adults

The additional safeguarding and compliance required to work with these groups is not normally possible in the scope of Computing taught course projects. If your target users fall into these categories talk to your supervisor about how you might simulate data and recruit experts (parents, teachers, carers) to undertake testing.

Declaration. If you cannot tick every box, please talk to your supervisor or module leader *

Please select 12 options.

- [x] If Roehampton students or staff participate in my research, I will ensure that I have explained the project carefully, obtained their verbal consent and explained that they may withdraw from the study at any time.
- [x] If my research involves people outside Roehampton University I will ensure that I have obtained written consent for their participation and confirmation of their right to withdraw.
- [x] All questionnaires or surveys will include participant information and a consent option
- [x] The data collected will only be used for the purpose of this study
- [x] I will anonymise all data collected from individuals in my report
- [x] I will hold data obtained for research only on Roehampton University's OneDrive
- [x] If I make any video or audio recordings, these will be held securely, not used for any purpose other than this research
- [x] All data collected, including audio and video recordings, will be deleted when I cease to be a Roehampton University student
- [x] If any activities may require a risk assessment I will speak with my Supervisor and prepare this.
- [x] I will not be carrying out any research directly with under 18 year olds or vulnerable adults
- [x] I will not be recording any 'special category' information about individuals
- [x] I can confirm that all Information supplied on this form is correct and my work complies with ethical standards

Supervisor sign-off - This section to be completed by Supervisor and Module leader

This section must be completed by your Supervisor. Leave it blank for now. You will receive an email from the module leader with a PDF attachment of your form which you can then send on to the Supervisor.

Supervisor name

Supervisor signature to confirm that the project meets ethics guidelines

The value must be a number

This research requires ethical approval from the Module leader

- Yes
- No
